

ARCHIBUS Extension for BUILDER™ SMS

Integrate the inventory and analysis of BUILDER with the user-friendly interface, data, reporting, KPI metrics, strategic analysis, and workflow of ARCHIBUS.

Centralize, Validate and Expand Data

Synchronize data in both directions, so that you only have to enter data once. ARCHIBUS validates data for accuracy and incorporates all data from BUILDER with additional asset management data. Create a reliable and complete central database.

Optimize with Performance Metrics

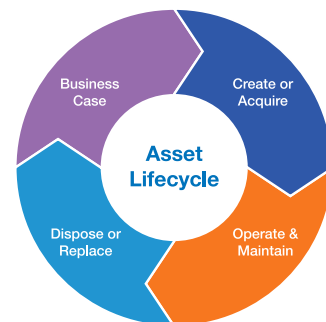

Inform strategy with performance metrics dashboards, incorporating KPIs from BUILDER and ARCHIBUS (including TCO). Address underperforming areas, track trends, and measure results.

Extend Asset Lifecycles

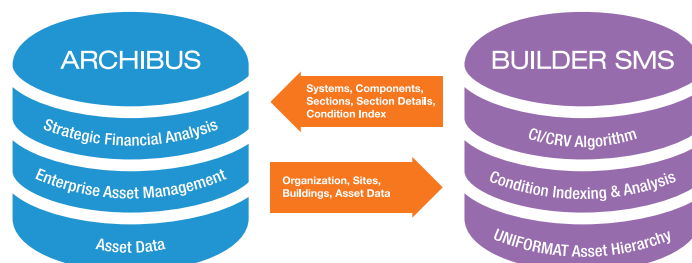

Link BUILDER to the ARCHIBUS Enterprise Asset Management (EAM) application. EAM provides a management framework for the entire lifecycle of every asset, so you can avoid lost, misused, or degraded assets.

REALIZE THE BENEFITS

- Reduce the risk of inaccurate data.
- Integrate with KPI metrics
- Centralize on one platform
- Visualize in 2D and 3D models on ARCHIBUS
- Optimize maintenance and compliance

> Take control of the entire lifecycle of every asset.

ACTIVITIES & SUMMARY

- Automatically updates BUILDER with ARCHIBUS data
- Automatically updates ARCHIBUS with BUILDER data
- Combine inventory and analysis on one platform

Best of Both Worlds

Leverage BUILDER's data and analysis with the full lifecycle management framework of ARCHIBUS Enterprise Asset Management. Optimize asset distribution, usage, and maintenance.

ARCHIBUS enhances BUILDER's inventory and analysis with:

Visual User Interface

Visualize data using interactive 2D and 3D models (CAD, BIM, and GIS) of campuses, floor-plans, systems, furniture and equipment. Follow metrics in easy-to-follow dashboards.

Workflow

Close work orders faster on a mobile framework, track scheduled orders throughout your organization, and automatically log the maintenance history of every asset. Simplify administration with easy reporting.

Better Data

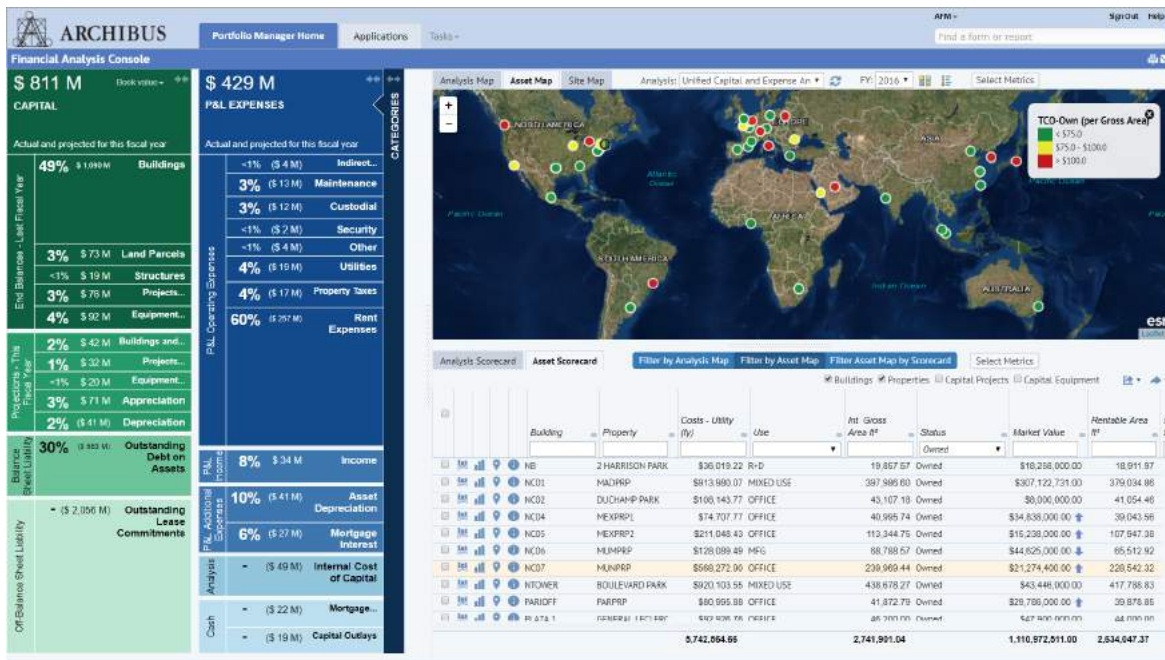

ARCHIBUS feeds BUILDER more detailed data on buildings, systems, equipment, and furniture. ARCHIBUS also tracks data that BUILDER doesn't track, including:

- HR data
- Space data
- Energy data
- Compliance data
- Finance data
- Maintenance data
- Lease data
- Project data

Reduced Risk of Data Failure

Support BUILDER with ARCHIBUS features designed to ensure quality data. ARCHIBUS collects, reconciles, and validates data into one database, to ensure the integrity of your system in the long-term.

- Validate data, remove redundancies
- Enter data only once on either system
- Integrate data from multiple systems
- Standardize data collection for consistency

> Integrate BUILDER with ARCHIBUS Strategic Financial Analysis, and track financial KPIs.
